Computer Diagnostics

When your auto repair shop recommends a 'computer diagnosis' it sounds serious, and everyone knows that serious vehicle problems can lead to serious repair bills. However, 360 Motors advise consumers not to be overly concerned because computer diagnosis is a common practice for identifying problems on today's microprocessor-controlled cars.

MARKET STRATEGY

"If your vehicle needs a computer diagnosis, don't be alarmed. This is often the most efficient and cost effective way for an automotive technician to diagnose a problem," says director, 360 motors. "Just be sure to have the repair facility explain what will be done before you authorize the work because 'computer diagnosis' is a generic term that can cover a wide range of operations." To help motorists better understand computer diagnosis, 360 Motors offers the following information. The automotive engineering team's goal is to provide motorists with unbiased information and advice on automotive technology.
